Kubota Engine America Unveiling Expanded Offerings for the Power Generation Market

KEA to feature new LowboyPro generator at ConExpo-Con/AGG 2017 in Las Vegas, Nev.

Lincolnshire, Illinois – Kubota Engine America Corp. is introducing a new generator to better serve the power generation market, its wide range of industries and its diverse applications. Kubota plans to display the GL14000 at ConExpo-Con/AGG in Las Vegas, Nev. March 7 – March 11, 2017, at booth #S84912.

The GL14000 is a 60Hz, 14 kVA single phase generator that is Tier 4 certified. It is powered by Kubota's reliable D902 diesel engine and is much quieter than anything similar on the market, with noise levels as low as 65 dB while running.

"The GL14000 complements our existing Lowboy II line of generators, but offers greater application potential to suit our customers' industrial needs," says Kubota's generator expert Gary Odden. "At Kubota, we saw increasing demand for diesel power generators in the 14 KVA range that can serve industries such as construction, oil and gas, and back-up power. The GL14000's higher outputs allow us to give them greater power capability."

Like Kubota's existing generators, the LowboyPro line's GL14000 is fully enclosed and compact, unlike most competitors that offer only open units. These features allow the GL14000 to reduce noise while keeping out environmental factors, to improve the running life of the generator. It also has both the receptacle and terminal in one package, offering more flexibility and versatility for use. It also includes a higher quality alternator that is triple sealed during production and uses corrosion resistant paint.

"We're very excited to soon be able to offer our customers more unmatched, reliable options," Odden says. "The GL14000 is unique in that it is compact and fully enclosed, while still carrying the renowned Kubota quality and unrivaled dependability our customers have come to expect."

The long-lasting alternator, higher outputs and other focused upgrades will only help us serve them more.”

The GL14000 will be on display at ConExpo-Con/AGG and will hit the market at the beginning of the second quarter this year. More information will be available on Kubota’s website ahead of that time: <http://www.kubotaengine.com/>

ABOUT KUBOTA ENGINE AMERICA:

Kubota Engine America (KEA) started as an engine division of Kubota Tractor Corporation in 1982. The Engine Division was dedicated to the sales and reinforcement of technical support of the expanding industrial diesel engine market in the United States. Kubota Corporation and KEA pioneered the compact, high-density diesel market as an alternative to small gasoline engines. In response to the continued rise in diesel engine demand in the US market, KEA was formed as an independent company and a subsidiary of Kubota Corporation and is headquartered in Lincolnshire, Illinois. Kubota is the world’s leading manufacturer of both compact diesel and gasoline engines, for industrial, agricultural, construction and generator applications. The company has built an extensive engine and generator distribution network with more than 800 dealers in North America, South America and the Caribbean to support its customer base. Kubota prides itself on its track record for reliability and engineering that fulfills its “For Earth, For Life” philosophy.
