Kubota unveiling its first-ever diesel engine above 100HP, ready for Stage V regulations

Company leadership to showcase new five liter engine, the V5009, at CONEXPO 2017 in Las Vegas

Lincolnshire, Illinois – The world's leading engine manufacturer of compact diesel engines below 100HP is unveiling a groundbreaking product at this year's CONEXPO show in Las Vegas. For the first time, Kubota is expanding its diesel lineup to include engines up to the 200HP class. The first model in its new Kubota 09 Series is the 5-liter V5009, scheduled to be on display exclusively for media and show attendees inside booth #S84912.

Kubota has spent years proactively developing engine solutions to meet the latest emission regulations in the United States, Europe and Japan. With looming Stage V requirements set to hit Europe beginning in 2019 or 2020, Kubota is now excited to be one of the leading manufacturers to announce Stage V ready diesel engines. While mass production of the V5009 will not begin until 2020, Kubota plans to have all engineering and supply work completed ahead of the upcoming emissions standards.

Kubota's compact, 4-cylinder V5009 will be Tier4 Final and EU Stage V ready, with an output of 157.3 kW and after treatment devices including a Diesel Particulate Filter (DPF) and Selective Catalytic Reduction (SCR). Like all Kubota engines known for high performance and reliability, the V5009 is no exception. It is designed to optimize combustion for high outputs and has top rated fuel consumption efficiency compared to other competing engines in the same power range. It will also feature a variety of power take off options for different accessories such as hydraulic pumps.

By unveiling its first solution to impending EU Stage V regulations and enhancing its diesel lineup to include the Kubota 09 Series, ultimately expanding offerings from 100HP to 200HP, Kubota continues to prove itself as an innovative, reliable answer.

To get an exclusive look at the Kubota 09 Series' V5009, stop by booth #S84912 at CONEXPO. For more information, visit: <http://www.kubotaengine.com/>.

ABOUT KUBOTA ENGINE AMERICA:

Kubota Engine America (KEA) started as an engine division of Kubota Tractor Corporation in 1982. The Engine Division was dedicated to the sales and reinforcement of technical support of the expanding industrial diesel engine market in the United States. Kubota Corporation and KEA pioneered the compact, high-density diesel market as an alternative to small gasoline engines. In response to the continued rise in diesel engine demand in the US market, KEA was formed as an independent company and a subsidiary of Kubota Corporation and is headquartered in Lincolnshire, Illinois. Kubota is the world's leading manufacturer of both compact diesel and gasoline engines, for industrial, agricultural, construction and generator applications. The company has built an extensive engine and generator distribution network with more than 800 dealers in North America, South America and the Caribbean to support its customer base. Kubota prides itself on its track record for reliability and engineering that fulfills its "For Earth, For Life" philosophy.
