

GENUINE OIL FILTERS

GENUINE OIL FILTERS

Made exclusively
for Kubota industrial engines

Kubota industrial engines encounter some of the harshest operating conditions on the planet. Don't trust your performance to some second-rate filter, designed only to be good enough. Only genuine Kubota filters are designed to remove harmful contaminants encountered in the tough applications where Kubota engines perform each day - where high temperatures, dust and other hazards are just part of the job.

Filter

Synthetic fibers provide high-efficiency filtration and hot oil resistance.

Internal Filter Element

The internal filter element has steel caps bonded to the filter media with oil-resistant adhesive. This increases the structural strength of the element.

Sealing Gasket

The sealing gasket compound is made for severe-duty service and high-temperature operation, reducing oil leakage due to hardening.

Why are Kubota filters better?

Tests show that over time, the filtration efficiency rate of a genuine Kubota filter is better than that of an after-market competitor. The efficiency of Kubota filters actually improves as the hours pass. Not so for the competition.
