

GENUINE OIL FILTERS

Kubota industrial engines encounter some of the harshest operating conditions on the planet. Don't trust your performance to some second-rate filter, designed only to be good enough. Only genuine Kubota filters are designed to remove harmful contaminants encountered in the tough applications where Kubota engines perform each day - where high temperatures, dust and other hazards are just part of the job.

Filter

Synthetic fibers provide high-efficiency filtration and hot oil resistance..

Internal Filter Element

The internal filter element has steel caps bonded to the filter media with oil-resistant adhesive. This increases the structural strength of the element.

Sealing Gasket

The sealing gasket compound is made for severe-duty service and high-temperature operation, reducing oil leakage due to hardening.

Why are Kubota filters better?

Tests show that over time, the filtration efficiency rate of a genuine Kubota filter is better than that of an after-market competitor. The efficiency of Kubota filters actually improves as the hours pass. Not so for the competition.

GENUINE OIL FILTERS

Made exclusively
for Kubota industrial engines
